

Think Again Posters: Women in Engineering (Set of 7)

Help your female students see themselves in a career in engineering, and increase the number of women and girls in your classes.

Hang this set of seven posters around your school's classrooms, counseling offices and hallways to inspire more female students to consider a career in engineering.

Printed on professional-quality poster paper, these 22x17 posters feature real-life multi-racial female role models working in seven different engineering occupations.

Think Women Can't Be Chemical Engineers?

Think Again.

"I chose Chemical Engineering as a career because of the versatility of the field. My experiences in graduate research and food manufacturing have been a significant part of my engineering experience. I hope to see my product available in grocery stores around the world."
—Aisha Watkins

Regardless of gender, the following are qualities of successful Chemical Engineers (ChEs):

- A love of problem solving to help companies produce such things as new products, gasoline additives, food products and pharmaceuticals or plans for the safe disposal of hazardous waste.
- Strong communication skills (oral and written) and interpersonal skills to work with teams of scientists, other engineers, manufacturing machine operators, technicians, management and government regulatory personnel as well as to build contacts and write reports.
- An analytical and detail-oriented personality, much to their credit, which enables them to find solutions for production problems, worker safety issues, or adjusting to changing government regulations.
- Sound business and marketing background to understand producer's viewpoint of the manufacturing process.
- Computer proficiency.
- Supply chain knowledge: understanding a how products are obtained, its manufacturing processes, its procedures to ship product to consumers.
- Cost understanding: awareness of profit models and costs for manufacturing a competitively priced product.
